

RIDWAN LANRE YUSUF

DATA SCIENTIST & AI/ML ENGINEER

 [LinkedIn](#) |  +234-9044843031 |  yosufridwan@gmail.com |  [Github](#) |  [Portfolio](#)

PROFESSIONAL SUMMARY

I build AI systems that actually work in production - RAG pipelines, vision classifiers, LLM agents, and data-intensive backends - across domains ranging from public policy to waste management to investor intelligence. With hands-on experience in the full ML lifecycle from ETL and feature engineering to deployment and MLOps, I bring a rare mix of breadth and execution. Backed by a growing foundation in Financial Engineering and Data Science at postgraduate level, I'm driven by problems where data and AI can create meaningful, measurable impact.

SKILLS & TOOLS

- **Languages & Core Tools:** Python, SQL, Git, Linux/WSL
- **Machine Learning & AI:** LLM Integration & Prompt Engineering, RAG Systems, NLP, Computer Vision, Classification & Regression, Time-Series Forecasting, Transfer Learning, Feature Engineering, Model Evaluation & Explainability
- **LLM & Agent Frameworks:** OpenAI API, Gemini API, LangChain, Groq/Llama, Ollama
- **Backend & APIs:** FastAPI, PostgreSQL, MySQL, Supabase, API Integration, Pytest
- **Data Engineering & MLOps:** ETL Pipelines, VectorDB's(ChromaDB, Pinecone), Airflow, MLflow, Docker, CI/CD, Poetry
- **Cloud & Infrastructure:** Azure Blob Storage, AWS EC2, GCP (BigQuery)
- **Scraping, Geospatial & Visualization:** Playwright, Selenium, BeautifulSoup, SHP/TIFF Processing, Matplotlib, Seaborn

EXPERIENCE

Data Scientist Whiteshield	Aug 2025 - Present
<i>Delivering production AI systems across public policy, urban infrastructure, and investment intelligence</i>	
- Architected and co-engineered FastAPI backends for multiple production AI products - owning API design, PostgreSQL schema, and end-to-end data flow from day one. - Designed document-to-vector ETL pipelines handling ingestion, chunking, embedding, and PostgreSQL vector storage - enabling fast, scalable retrieval for downstream LLM features. - Trained and shipped a CNN computer vision classifier for public-sector site analysis, hitting 90%+ precision and recall - deployed as part of a live decision-support system. - Built production geospatial pipelines over SHP and large-scale TIFF files, provisioning Azure Blob Storage, automating TIFF processing, and generating emergency facility, transport accessibility, and rainfall proximity metrics at scale. - Built production RAG systems using OpenAI and Gemini - combining embedding retrieval, prompt engineering, and context-aware generation to deliver accurate, document-grounded AI responses. - Augmented an existing vision model with LLM reasoning layers - adding waste type detection and legality assessment on top of CNN outputs, turning a classifier into a multi-modal decision engine. - Engineered an autonomous outreach agent integrating a third-party contacts API to automate investor profile lookup, contact discovery, and route-to-reach recommendations. - Delivered a high-accuracy web scraping system using Playwright, Selenium, and BeautifulSoup - extracting structured people and company profiles including images at 90%+ accuracy across heterogeneous sources.	
ML Engineer & Data Scientist Independent	Oct 2023 - Aug 2025
<i>Research ML consulting for PhD contractors + self-directed AI/ML engineering across NLP, forecasting, data science</i>	
- Contracted by 4+ PhD researchers to design and deliver healthcare ML systems - spanning model selection, feature engineering, training, and evaluation - to research-grade standards. - Engineered NLP pipelines for clinical text - extracting doctor comments, surfacing recurring themes, and structuring unstructured medical notes into actionable hospital intelligence. - Built The Fineprint Project, an LLM-powered Terms & Conditions analyzer that scans documents for suspicious clauses and explains them in plain language; features a podcast-style audio output using Groq LLM, Gemini TTS. - Developed a YouTube comment intelligence tool - combining TF-IDF filtering, sentiment analysis, topic extraction, and GPT-4 categorization into an interactive web dashboard for content creators and researchers. - Built a UEFA Champions League progression predictor with custom feature engineering - opponent strength, goal efficiency, current form index - achieving 7/8 Top 8, 14/16 Round of 16 correct predictions. - Engineered a US Economic Recovery Index post-COVID using GDP, unemployment, and trade flow data - with indicator weights derived via PCA rather than assumed, ensuring data-driven scoring; extended the framework to compare recovery trajectories across African economies.	
Data Science Tutor / Program Mentor - ALX Africa, Aptech & Amdor Analytics	2023 - Present
- Mentor learners across Data Science and Analytics tracks, guiding end-to-end project development from data cleaning and feature engineering to model evaluation and deployment. - Support learners in applying statistical reasoning and ML algorithms to real-world datasets using Python, Pandas, Scikit-learn, and Power BI.	

EDUCATION

University of Ibadan, Nigeria - M.Sc. Data Science	In Progress
WorldQuant University, Louisiana, US - M.Sc. Financial Engineering	In Progress
Dominican University, Ibadan, Nigeria - B.Sc. Computer Science	2023 - 2024

CERTIFICATIONS & TRAINING

WorldQuant University: Applied AI Lab, Foundations in Financial Engineering, Applied Data Science Lab
ALX Africa: Data Science
